

Essentials

GPS tracking

timer

Reliable map

Audio assistant

Reliable address information

Design

Should we have a dark/light theme depending on time of day?

When looking at how fast you walk, higher speed make lighter colored paths

The users could choose a dark theme to the overall app

The app icon could have a pedestrian logo on it, and it could have the colors green and white possibly

When user types in an address, it displays pictures of what is around it.

Features

Tracking how fast/slow you're walking

Shows pedestrian safe routes that don't just follow routes

records where heavy traffic is

users can report paths on roads without sidewalks

Users can report where there is construction in a walkable area like sidewalks

Accesibilities

Show routes for people on wheelchairs to avoid routes with stairs

Mjh47

Audio cues for blind people

Mjh47

Misc.

Users can report hazards on paths (like in Waze)

Users could gain points for reporting the same things other users do (also like Waze)

Users can report crime that has happened in an area
